

Name	Fraser Walsh-Beney
Position	Occupational Therapist
Qualifications	Occupational Therapy
Memberships	RCOT HCPC – OT65273

I have been working as an Occupational Therapist for the last 13 years within the NHS, and I have spent the majority of that time specialising in Neurological Rehab. I pride myself in providing the most appropriate assessment and rehabilitation, keeping the individual with the injury as the focus at all times.

I have extensive experience working in Acute and Rehabilitation Neurological hospitals, but I have predominantly been based in community Neuro Rehab teams.

The community roles have been based around supporting the transition from hospital to home, and then progressing on with personal goals. I really value working with people in their own environment, as I believe it makes a significant difference to people's physical and cognitive recovery.

I have supported multiple people to return to meaningful work following brain injury; providing advice and support for employers to achieve a successful outcome.

I currently work in a hospital setting, where my role encompasses completing assessments and rehabilitation for people with significant acquired brain injury. I work effectively within multidisciplinary teams, and have excellent communication skills to reflect on Occupational Therapy sessions.

I aim to build a therapeutic relationship quickly, and I strongly believe in providing person centred rehab, focusing on what is meaningful for the individual and building their recovery.

Specialist areas/skills include:

- Acquired brain injury
- Functional upper limb rehab
- Cognitive assessment and rehabilitation
- Complex moving and handling
- Vocational Rehab
